# Hospital-wide collaboration to reduce patient harm

## Qview

### H E A L T H

*Enterprise software to advance quality.*

**Qview is an integrated multidisciplinary EHR to collect, review, and correct all adverse events.**

## COLLECT

Capture incident reporting data as well as physician-reported adverse events to identify and measure patient safety and quality indicators.

## REVIEW

Easily and securely communicate between the hospital and physicians across all departments.

## CORRECT

Implement changes and track outcomes to reduce or eliminate future occurrences and report patient safety outcomes.

# SOFTWARE FEATURES

### Incident Reporting, Case and Peer Review

- All modules within one software system for seamless documentation, reviews, and reporting
- Ability to elevate incidents to case or peer review without ever leaving Qview
- Integrated morbidity & mortality review and CQI processes

### Ease and Usability

- Configurable to track patient safety indicators relevant to department or specialty in addition to capturing hospital-wide CQI data
- Preloaded hospital, department, and specialty-specific templates for quick onboarding
- Easily adjust templates to a group's workflow - no programming required

### Internal Messaging

- Fully encapsulated and priviledged communication within and across all departments
- Collaborate on &/or refer cases and tasks
- Create new tasks and link messages to cases

### Security

- Software lives behind a hospital's firewall
- HL7 2.X & DICOM protocols for medical data and imaging
- HIPAA and ISO 13485 compliant
- User authentication with LDAP single sign-in
- Privilege-based authority to view, access, and input information

### Conferences

- Auto-generation of standardized presentation slides
- Configurable slide templates for department or topic-centric presentations
- Library of practice guidelines and resource documents
- Tracking of CME and self-assessment credits

### Reporting

- Realtime quality statistics via query filters and searchable database
- Configurable reports for regulatory, safety, and quality submissions
- Configurable fields to meet reporting needs at both the institution and department level

## ONE TOOL. ONE GOAL.
### Enterprise software to advance quality.

### STANDARD

- One quality system used throughout the hospital
- Defined, documented, and auditable data
- Ability to track core criteria within configurable template-based workflows and presentations

### SECURE

- Certified role-based user authentication
- Protected patient and provider data
- Contained inter-departmental communication
- Safe, single-user sign-in

### SIMPLE

- Easy to learn and easy to operate
- Usable via mobile digital devices &/or desktop computers
- Pulls patient data directly from the EMR
- Auto-generated slides for presentations
- Configurable without programming
- IT-friendly onboarding and implementation
