

# Whole System Quality

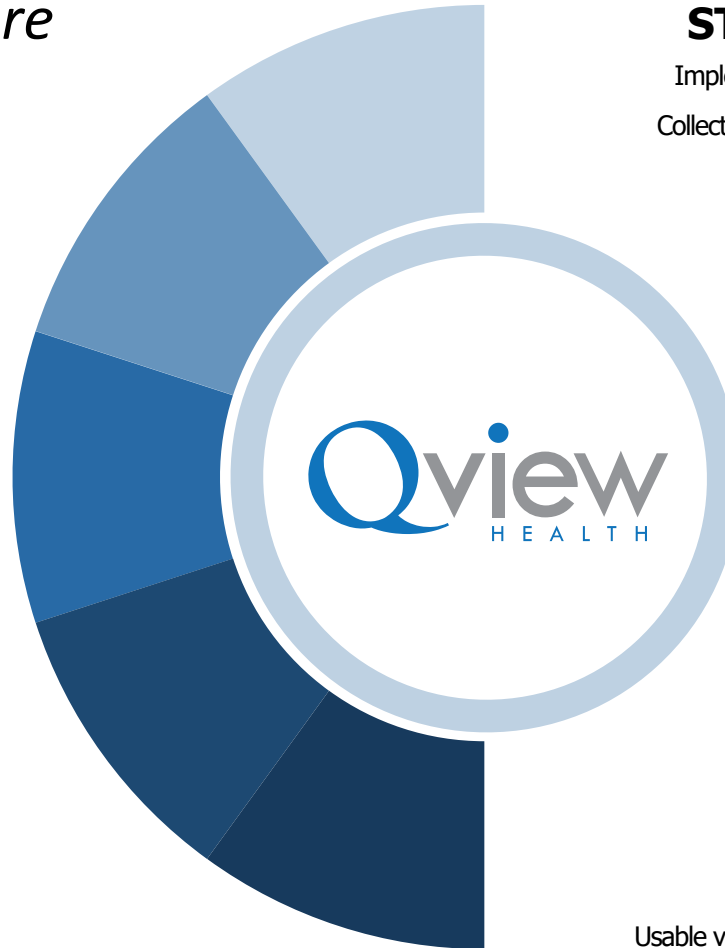

*Integrated software to improve quality in healthcare*

# One Tool. One Goal.

*Qview is for healthcare  
systems that want  
integrated quality  
management  
in a secure,  
standard, and  
easy to use software.*

## **STANDARD YET FLEXIBLE**

Implement and track hospital-wide quality initiatives.  
Collect hospital and practice-specific data in one place.  
Configure by department, service &/or specialty  
without disturbing current workflows.  
Standardize reporting.

## **HIGHLY SECURE**

User-based access and authorities.  
Safely communicate and collaborate  
across departments.  
Maintain provider privilege  
while protecting patient data.

## **EASY FOR EVERYONE**

Efficient and IT-friendly implementation.  
Quick user onboarding with practice-specific  
templates, presentations, and reports.  
Usable via desktops, laptops, smart phones, and tablets.

# Hospital-wide Quality

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives and patient safety indicators relevant to each department, service &/or specialty.

## PEER REVIEW

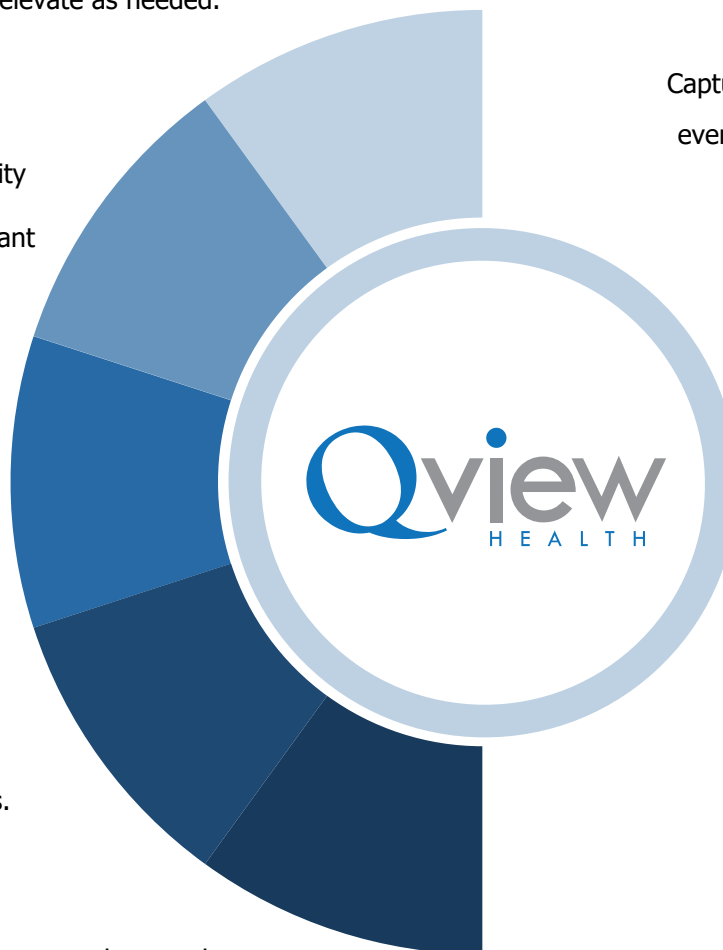

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

## COLLECT

Capture incidents and physician-reported adverse events to identify and measure quality concerns.

## COLLABORATE

Securely communicate and collaborate across departments to perform root cause analysis.  
Elevate to peer review if needed.

## CORRECT

Seamlessly implement quality improvements and track outcomes to reduce or eliminate future occurrences.

## REPORT

Run hospital-wide or departmental reports to identify trends. Import and export key metrics to support submissions.

# Capture & Review Events

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives & patient safety indicators relevant to each department, service &/or specialty.

## PEER REVIEW

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

User-based privileges give each Qview user access, visibility, and authority according to their role in the hospital.

***Without ever leaving Qview***  
nurses and paraprofessionals can:

- Create, review, and track events
- Send and receive secure messages to other departments
- Suggest, implement, and track quality improvement plans
- Elevate events to case review or peer review
- Run reports

# Perform Morbidity & Mortality Reviews

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

Capture physician-generated adverse events. Configurable to align with department or service-specific workflows.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives & patient safety indicators relevant to each department, service &/or specialty.

***Without ever leaving Qview***  
physicians and providers can:

- Create, review, and track cases
- Send and receive secure messages to other departments
- Create, assign, and respond to tasks
- Send and reply to referrals
- Elevate cases to peer review
- Create and give presentations from practice-specific templates
- Implement and track quality improvements
- Run and export reports

## PEER REVIEW

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

# Review Individual Concerns

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives & patient safety indicators relevant to each department, service &/or specialty.

## PEER REVIEW

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

Incidents or cases can be seamlessly elevated to peer review by authorized users while maintaining privilege and security.

***Without ever leaving Qview***  
committee members can:

- Review case or incident history
- Send and receive secure peer review-related messages
- Protect provider confidentiality
- Educate &/or recommend post-review actions if needed
- Generate formal letters to support the peer review process

# Review & Report Trends

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives & patient safety indicators relevant to each department, service &/or specialty.

## PEER REVIEW

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

Collect and review hospital-wide core quality data as well as service-specific patient safety indicators without creating extra workload.

***Without ever leaving Qview***  
authorized users can:

- Run practice-specific reports by department, service, or specialty
- Run hospital-wide reports on core quality initiatives
- Identify and address quality concerns in real time
- Review quality-related trends over time

# Understand the Big Picture

## INCIDENT REPORTING

Collect and review incidents related to patient feedback, facility, system &/or professional issues. Seamlessly elevate as needed.

## CASE REVIEW

Collect and review physician-created morbidity and mortality data. Track hospital-wide initiatives & patient safety indicators relevant to each department, service &/or specialty.

## PEER REVIEW

Securely review elevated incidents or case reviews related to individual performance &/or professional practice concerns.

## REPORTS

Provide data-driven insights at the hospital, department, &/or disease level. Quickly identify trends and address quality concerns.

## QUALITY DATA

Import data from outside sources and query data from the hospital HL7 system to generate meaningful reports. Allows for comparison of outside data within Qview based on user-created queries.

Integrate several sources of data to gain a comprehensive and holistic view of quality within your healthcare system.

***Without ever leaving Qview***  
authorized quality professionals can:

- Import external quality data
- Query data from the EMR
- Integrate multiple sources of data with Qview-collected data
- Quickly identify numerator and denominator data to benchmark quality initiatives
- Run and export meaningful and accurate quality reports

# Less Silos. More Collaboration.

*Qview offers real-time reliable  
data in a standard yet  
flexible system  
that facilitates  
hospital-wide  
collaboration, learning,  
and quality improvement.*

## **WORK TOGETHER**

Secure intra and interdepartmental messaging encourages collaboration across disciplines.

## **REMOVE SILOS**

Flexible and adaptive to any service, specialty, or department, Qview eliminates the need for unique or paper-based systems.

## **REAL-TIME**

Immediately capture and monitor events to gain early insight and quickly implement corrective actions.

## **QUALITY OUTCOMES**

Support a hospital-wide culture of quality while optimizing operations across the care continuum.
